Connect
By MediRecords

Industry leaders in integration

What is Connect by MediRecords?

MediRecords Connect is a secure and innovative healthcare platform that streamlines data integration and supports interoperability among healthcare providers. Our platform offers a robust solution that enables healthcare organisations to access patient data and applications seamlessly with proprietary REST API and Fast Healthcare Interoperability Resources (FHIR) capability and the use of SNOMED terminology coding. By integrating with third-party software and systems, Connect by MediRecords simplifies workflows, improves efficiencies, and assists healthcare providers to deliver better care.

Features

- FHIR & Proprietary API services
- SNOMED coding
- BI dashboards
- Real-time data exchange
- Secure communication
- Customisable workflows & automation
- Advanced security measures
- Data Migration & Record Sharing

Why choose MediRecords Connect?

Our Connect platform is designed to be easy to use and integrates with your existing systems, so you can start seeing the benefits right away. Plus, our advanced security features ensure patient data is always protected.

FHIR

FHIR is the future standard of health data interoperability. MediRecords has enabled FHIR as a data exchange mechanism to make patients' data accessible, usable, & computable across various systems securely.

Our APIs

Patient

Exchange patient data with 3rd party systems easily, import patient records or notes into your database, create surveys and web forms to update the patient database, and update patient files from remote hardware devices or services.

Appointments

Our platform offers medical integration & scheduling with 3rd party booking systems & the ability to sync multiple healthcare practitioners' calendars to improve patient flows. Additionally, we provide reporting software integration for recurrence & patient no-shows.

Correspondence

Easily filter & arrange correspondence as required in both our own and 3rd party applications, & create reporting, actions, & follow-ups with the ability to combine webhooks to push correspondence triggers.

Configuration

Utilise patient custom fields to record additional patient identifiers and easily create, update, & delete tags to categorize patient records. With the ability to tag patient records, quickly search and filter patients by a specific tag.

Benefits

Open APIs

The greatest barrier to effective virtual healthcare is closed, siloed technology. Our APIs are open, ensuring healthcare platforms can securely connect & share data wherever your organization needs it.

Save time & money

Digitise communications for a seamless experience, automate routine work & remove data discrepancies. This allows you to focus on quality patient care, rather than manual entry or IT systems & updates, helping to save time & money.

Secure patient data

Advanced security features implemented to protect patient data 24/7. Enjoy peace of mind knowing your patients' information is secure with the latest in data protection technology.

Leading standards

Built on the latest REST standards, our APIs send clinically coded SNOMED data that can be easily interpreted by other systems, enabling accurate patient records & powerful healthcare analytics.

Rich integrations

Specialty applications can be built on top to enhance the product. From integrating into internal applications, to external 3rd parties, innovating your business has never been easier.

Pivot & scale, fast

MediRecords products rapidly introduce new innovations, allowing you to pivot & scale your business and models of care quickly & effectively.
